ART UNIT

PAPER NUMBER

2863

DATE MAILED: 07/24/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/501,370	Applicant(s) COLEOU, THIERRY	
	Examiner Toan M. Le	Art Unit 2863	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 July 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 7/14/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-15 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

With respect to claims 1 and 5-7, the method does not produce a useful, concrete, and tangible result. It is unclear how the result is being stored, displayed, or used in any tangible manner. To view the new guidelines for 35 U.S.C. 101 please view the following OG notice.

<http://www.uspto.gov/web/offices/com/sol/og/2005/week47/patgupa.htm>

Abstract

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

Art Unit: 2863

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it is not limited to a single paragraph within a range of 50 to 150 words.

Correction is required. See MPEP § 608.01(b).

Claim 8 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 3.

When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim 9 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 4.

When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by “Ordinary Cokriging Revisited”, Goovaerts (referred hereafter Goovaerts).

Referring to claim 1, Goovaerts discloses a method of filtering at least two series of seismic data representative of the same zone, the method being characterized by determining an estimate of the component that is common to the data series, and deducing a resolution of these data series from the estimate (pages 22-23, Simple Cokriging section).

As to claim 2, Goovaerts discloses a method according to claim 1, characterized by determining a cross variogram of these data series and solving the co-kriging equation, which results in automatically deducing an estimate of the component that is common to the data series (pages 23-25, Correlogram Notation section; pages 35-39, pages 35-39, Performance Comparison section).

Referring to claim 3, Goovaerts discloses a method according to claim 2, characterized by determining the orthogonal residues for the various data series by subtracting the estimated common component from each of the data series (pages 23-25, Correlogram Notation section; page 25, ordinary Cokriging section).

As to claim 4, Goovaerts discloses a method according to claim 3, characterized by implementing kriging analysis to resolve said orthogonal residues (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section).

Referring to claim 5, Goovaerts discloses a method of processing seismic data, comprising: comparing two series of seismic data corresponding, for the same zone, to grids of at least one common attribute obtained for two distinct values of at least one given parameter, said comparing including filtering at least two series of seismic data representative of the same zone by determining an estimate of the component that is common to the data series, and

Art Unit: 2863

deducing a resolution of these data series from the estimate (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section).

As to claim 6, Goovaerts discloses a method of filtering at least one series of seismic data representative of at least one zone, the method being characterized by identifying a model of a component of three-dimensional variability of its variogram, subtracting said model from the experimental variogram, and solving the kriging equation corresponding to the different variograms in order to deduce an estimate of the corresponding variability component on the data series (pages 21-22, Introduction section; pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section; pages 35-39, Performance Comparison section; figure 1).

Referring to claim 7, Goovaerts discloses a method of processing seismic data, comprising: comparing two series of seismic data corresponding, for the same zone, to grids of at least one common attribute obtained at two different instants, said comparing including filtering at least two series of seismic data representative of the same zone by determining an estimate of the component that is common to the data series, and deducing a resolution of these data series from the estimate (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section; pages 35-39, Performance Comparison section; figure 1).

As to claim 8, Goovaerts discloses a method according to claim 1, characterized by determining the orthogonal residues for the various data series by subtracting the estimated common component from each of the data series (pages 23-25, Correlogram Notation section; page 25, ordinary Cokriging section).

Referring to claim 9, Goovaerts discloses a method according to claim 8, characterized by implementing kriging analysis to resolve said orthogonal residues (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section).

As to claim 10, Goovaerts discloses a method according to claim 5, characterized by determining a cross variogram of these data series and solving the co-kriging equation, which results in automatically deducing an estimate of the component that is common to the data series (pages 23-25, Correlogram Notation section; pages 35-39, pages 35-39, Performance Comparison section).

Referring to claim 11, Goovaerts discloses a method according to claim 5, characterized by determining the orthogonal residues for the various data series by subtracting the estimated common component from each of the data series (pages 23-25, Correlogram Notation section; page 25, ordinary Cokriging section).

As to claim 12, Goovaerts discloses a method according to claim 11, characterized by implementing kriging analysis to resolve said orthogonal residues (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section).

Referring to claim 13, Goovaerts discloses a method according to claim 7, characterized by determining a cross variogram of these data series and solving the co-kriging equation, which results in automatically deducing an estimate of the component that is common to the data series (pages 23-25, Correlogram Notation section; pages 35-39, pages 35-39, Performance Comparison section).

As to claim 14, Goovaerts discloses a method according to claim 7, characterized by determining the orthogonal residues for the various data series by subtracting the estimated common component from each of the data series (pages 23-25, Correlogram Notation section; page 25, ordinary Cokriging section).

Referring to claim 15, Goovaerts discloses a method according to claim 14, characterized by implementing kriging analysis to resolve said orthogonal residues (pages 22-23, Simple Cokriging section; pages 23-25, Correlogram Notation section; page 25, Ordinary Cokriging section).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
